#### Persistence and degradability

- Biodegradability : not applicable

#### Other adverse effects

- Additional ecological information : In solid state these minerals are a major part of the rocks of the earth's surface.  
They are dissolved in a natural state and indispensable part of the natural waters.  
These minerals are not biodegradable.  
Negative effects on the environment should therefore be excluded.  
Restrictions may be indicated that concentrated suspensions these minerals in natural waters may have an unfavorable effect on water organisms (disturbance of the micro flora and -fauna in the sediment and subsequent detriment to the existence of higher water organisms).
